

Analysis of BMW Sales Performance Using Power BI (2010–2024)

GROUP 01

INTRODUCTION

- The automotive industry is highly competitive and data-driven.
- BMW operates across multiple regions, models, and fuel types.
- Understanding sales trends and performance is essential for strategic decision-making.

Data Source

<https://www.kaggle.com/datasets/yOussef kandil/bmw-sales2010-2024>

Time period: 2010 – 2024

Total records: 50,000

Features include both qualitative and quantitative variables.

Key Variables

Model, Year, Region, Fuel Type, Transmission, Engine Size, Price (USD), Sales Volume, Sales Classification

Problem Statement

Management needs a clear and interactive way to understand BMW sales trends, regional performance, and key factors influencing sales from 2010 to 2024 in order to support data-driven business decisions.

Data Preparation Steps

- Imported dataset into Power BI
- Checked for missing values and inconsistencies
- Ensured correct data types for numeric and categorical variables
- Created calculated measures such as:
 - Total Sales Volume
 - Average Price
- Prepared the dataset for visualization and filtering
